SustainaView®
Window Technology

The all-foam formula of Super Spacer® blocks the heat escape path and provides one of the best thermal performances in the industry.

Less condensation can lead to less bacteria and molds. It can decrease the likelihood of fungi, viruses and mites that cause respiratory infections, allergies and asthma.

With improved sound absorption over traditional metal spacers, NO-Metal Super Spacer is a huge help in keeping the decibels down.

Our all-foam formula offsets the effects of temperature changes, barometric pressure, wind load and glazing pressure. The end result is less seal failure and fewer stress cracks.

For the most energy efficient and durable windows that give you the added benefits of improved sound absorption and less chance of condensation, choose windows made with Super Spacer® all-foam insulating glass spacer.
